Let’s look at Pet Insurance

The pet owner pays $20 a month to have her cat insured against accidents and illnesses, thus transferring her personal financial risk, should her cat need medical attention.

Thankfully, the pet insurance policy covers broken bones, so the insurance provider reimburses the pet owner for the medical expenses after she files a claim.

Unfortunately, the insured cat suffers a broken leg and the pet owner incurs $2,000 in vet bills for visits, X-rays and treatment.

Insurance is a contract that offers full or partial financial compensation for loss or damage caused by an uncontrollable event. In exchange, the insured individual pays a sum of money known as a premium.

Insurance providers operate by pooling the risk of a large number of policyholders. Over the lifetime of an insurance policy, some policyholders will make claims, but most won’t. The premiums of many are pooled to pay for the claims of a few.

Does everyone pay the same premium?

No, insurance providers set premiums that allow the system to function and generate a profit.

Insurance providers apply statistics to understand the amount of risk their policyholders represent, and then adjust their premiums accordingly. It’s why your age or gender can influence your car insurance rates, or why your family medical history or lifestyle can influence your life insurance premiums.

The premiums are based on many factors:

- The policyholder pays $20 a month to have her cat insured against accidents and illnesses.
- The insured cat suffers a broken leg and incurs $2,000 in vet bills.
- Pet insurance policies cover broken bones.
- Insurance providers pool the risk of many policyholders to pay for claims.
- Insurance providers consider factors like age, gender, and lifestyle when setting premiums.

Intro to Insurance

Common insurance types include:

- Auto
- Business
- Contents
- Flood
- Health
- Home
- Life
- Mortgage
- Pet
- Travel

How does insurance work?

By taking out an insurance policy, you are actually paying the insurer to assume your financial risk in the situation specified in your contract.

How do insurance providers make money?

Insurance providers operate by pooling the risk of many policyholders to pay for claims.

Does everyone pay the same premium?

No, insurance providers set premiums that allow the system to function and generate a profit.

Premiums are based on many factors:

- If premiums are set too low, if emergency costs are higher than anticipated or if more individuals make claims than expected, the insurance provider will lose money.
- Insurance providers apply statistics to understand the amount of risk their policyholders represent, and then adjust their premiums accordingly.
- It’s why your age or gender can influence your car insurance rates, or why your family medical history or lifestyle can influence your life insurance premiums.
